

Paint Remover Application

Global Advantech GreenChem's Ultra-Green Paint Remover Gel CM707 is a **non-hazardous**, high performance paint and graffiti remover. It is safe, non-toxic and contains only fully biodegradable components that do not accumulate in the environment.

CM707 is formulated to remove most types of paint and graffiti from all surfaces, with the exception of perspex (polymethyl methacrylate) and polycarbonates (Plastic-Safe Paint Remover CM708 is recommended for these plastics).

A domestic house, built 30 years ago with wooden doors and window frames, had been painted many times. However, the paint had never been stripped from the external doors prior to repainting. The external doors were in need of repainting, but the paint was very thick and flaking in places. It needed to be removed first.

Ultra-Green Paint Remover CM707 was applied to the door with brush and left for 10 minutes. Paint was then removed with a scraper – 4 layers of paint were removed with the first application of CM707; the layers of paint had softened through and came off in strips. It was necessary to apply the CM707 and remove layers of paint with the scraper twice more – there were more than 12 layers of paint on the door. Photographs of the door before (left) and after (right) are shown above.
